Objectives. The aim of the OREDA JIP is to improve Safety, reliability and maintenance through the collection and analysis of reliability data. Specifically, the OREDA members are working to. Improve safety; by providing experience and data on risks related to offshore operations. Improve reliability and availability; by the use of reliability data one can select the most reliable equipment and configuration, and reveal weak designs for future improvement.

Description. The main objective of the Guidance Document (GD), prepared by ESReDA "Accident Analysis Group, is to highlight some vital aspects of how to obtain data for use in the analysis of accidents, incidents and near-misses, and further to suggest ways of overcoming the problems that

may be encountered in such work.

The reliability data in the handbook are well suited for SIL analyses according to IEC 61508 and IEC 61511. Data dossiers for field devices (detectors, transmitters, valves, etc.) and control logic (electronics) are presented. The dossiers are based on various sources, such as OREDA, RNNP (Risk level in the Norwegian Petroleum industry), data from operational reviews, vendor data as well as additional expert judgements.

exida frequently compares field failure rate data from various sources to FMEDA results in order to validate the FMEDA component library. However, because OREDA and FMEDA methods are quite different, it is not possible to compare their results directly. A methodology is presented which creates predictions and estimations that are more comparable.
