Dichotomous Keys for Fish Dichotomous keys can be created for saltwater or freshwater fish or more specifically for a single type of fish such as sharks or tuna. For example, there are about 28 families of fish in the Great Lakes that number about 160 species. Minnows alone have some 62 species.

Fish Dichotomous Key | Biology Dictionary

A dichotomous key is a listing of specific characteristics, such as structure and behavior, in such a way that an organism can be identified through a process of elimination. In this investigation, it is expected that you: 1) Use a key to identify 14 shark families. 2) Study the method used in phrasing statements in a key.

Classifying Sharks using a Dichotomous Key

Biology Resources for Teachers provides a great example and explanation of a simple dichotomous key. Most dichotomous keys focus on one specific trait to lead the user to an answer, like leaf patterns on stems or fin shape of fish species. The example above chooses beak shape to help identify the mystery bird samples.
