Documenting Software Architectures, Second Edition, provides the most complete and current guidance, independent of language or notation, on how to capture an architecture in a commonly understandable form. Drawing on their extensive experience, the authors first help you decide what information to document, and then, with guidelines and examples (in various notations, including UML), show you how to express an architecture so that others can successfully build, use, and maintain a system ...

## **Documenting Software Architectures: Views and Beyond**

...

The SEI has a proven approach to documenting software architecture called Views and Beyond, or V&B. The name emphasizes that we use the concept of a view as the fundamental organizing principle for architecture documentation. A view represents a set of system elements and the relations associated with them.

4+1 is a view model used for "describing the architecture of software-intensive systems, based on the use of multiple, concurrent views". The views are used to describe the system from the viewpoint of different stakeholders, such as end-users, developers, system engineer, and project managers. The four views of the model are logical, development, process and physical view.
