Molecular and Cell Biology

Molecular and cell biology is the basic science that seeks an understanding of biological processes in terms of the properties and functions of the molecules that make up living cells. The scope of questions addressed ranges from evolution to development to the regulation of gene expression. A career in molecular and cell biology requires a strong background in biology as well as a solid foundation in chemistry, mathematics, and physics.

Molecular and Cell Biology Major - Department of ...

Molecular cell biology is a branch of biology which is a relatively new field compared to other fields of study. Scientists who study this field study the structure and properties of molecules found within cells. This field is often closely linked with biochemistry, in which the chemical reactions of biological molecules are looked at.
