- El Nodemcu V3 Lolin, tiene un precio de unos 3 € en el mercado chino . Es una tarjetita (3 x 6 cm) que, como se ve en la imagen, tiene integrado el ESP8266-12E, con lo cual tiene 16 puertos de entrada/salida. Además la gran ventaja es que tiene el chip CH340 que sirve para conectarlo al ordenador por USB. Tiene conectores machos que se pueden insertar en protoboard pero es un poco ancho y no deja espacio en los pines laterales de la protoboard, esto para mí no tiene demasiada importancia.
