The ASCII SQL function returns the ASCII (American Standard Code for Information Interchange) value of the first character in a field. `SELECT ASCII (StudentName) FROM Students` This example will produce the number 72 if the StudentName field contained the string "Hannes". Why 72? 72 is the ASCII code for H.

SQL Joins is the answer you're looking for. More often than not, you will have to create reports & find data which is spread across multiple tables. Primary keys, foreign keys and other candidate keys that we have in our tables are used to join different tables and match the data that needs to be related.
