DNA Structure, Replication, and Technology Introduction. Back when Gregor Mendel was studying pea plants, he noticed that there were certain characteristics, or traits, passed on to later generations. He called those traits "genes" because calling them "gregors" was a little too un-monkey. Genes are traits that can be inherited; things like eye color, hair color, blood type, and colorblindness are all inherited traits that you receive from your parents.

DNA Structure, Replication, and Technology Introduction ...

The basic process of recombinant DNA technology revolves around the activity of DNA in the synthesis of protein. By intervening in this process, scientists can change the nature of the DNA and of the gene make-up of an organism. By inserting genes into the genome of an organism, the scientist can induce the organism to produce a protein it does ...
