Statistical thinking is the ability to align one's thoughts with the fundamental ideas of statistics, allowing the person to make better decisions in any given situation. There is a lot we can learn from the structured, rigid nature of statistics, and a surprising amount of that carries over to areas of life that we wouldn't normally associate with statistical analysis.

What Is Statistical Thinking?

This requires disciplined approaches to identifying problems and the ability to quantify and interpret the variation that you observe in your data. In this module, you will learn how to clearly define your problem and gain an understanding of the underlying processes that you will improve.
