Wiring Manual - Eaton

2 Rockwell Automation Publication 750-IN111A-EN-P - June 2019
PowerFlex 750-Series I/O, Feedback, and Power Option Modules
Wiring Important points to remember about I/O wiring:
• Use wire with an insulation rating of 600V or greater.

PowerFlex 750-Series I/O, Feedback, and Power Option Modules

Power is supplied by connecting a step down transformer to the control electronics by connecting to phases L2 and L3. The lower voltage is then used to supply power to the left and right rails of

Wiring Closets: Finally, some homeowners build wiring closets. The closets essentially act like a breaker box but serve your home automation wiring and system needs. A wiring closet should be centrally located and contain patch panels and media servers. It may also house your router—though the rule about

locating it centrally still applies.

What wiring do I need for a home automation system?

- Power requirements assume a single transmitter per cable. • At startup, the power source must provide a minimum of 1.5 amps of short-term current per transmitter and not pull voltage below 18 VDC. • Length and conductor diameter of the power cable must be sized to provide 18 VDC minimum at the power terminals, at a load current of 0.7 amps.

Micro Motion 5700 Ethernet Transmitters

of capital, loss of power, additional expenses in the use of existing power facilities, or claims against the purchaser or user by its customers resulting from the use of the information, recommendations, and descriptions contained herein. The information contained in this manual is subject to change without notice.
